
GSM-VAC4+LITE

GSM Voice / Text Message Alarm Communicator / Autodialler

The GSM Voice Alarm Communicator (GSM-VAC4+LITE) is an inexpensive and reliable device that transmits pre-recorded speech messages and / or SMS text messages, on alarm, to up to 4 different telephone numbers. The GSM network is used for the transmission and is especially suitable for locations where transmission is not possible via fixed telephone or an additional signal path is required. It has 2 alarm inputs. When an input is activated it automatically dials out to pre-programmed numbers and an alarm message is sent. GSM-VAC4+LITE also has 2 outputs to control devices remotely.

Description

- 2 alarm inputs.
- 2 Remote control outputs.
- Easy programming of up to 4 telephone numbers / input.
- Dual band GSM module.
- Programming SIM card with GSM phone keypad / SMS / PC.
- Two recorded messages up to 10 seconds / input.
- Two pre-programmed SMS text messages.
- Headset for recording / playback messages.
- Reset input for cancelling dialling.
- Easy installation and programming.

Specification

- Input Voltage: 9.00 to 35.00 V DC.
- Activated by N.O., N.C., +12V DC or GND.
- Current: 40mA (idle), 350mA (active).
- Dimensions: PCB 105 x 80 mm (boxed 118 x 170 x 30 mm)

Order Codes

- GSM-VAC4+LITE - In enclosure with antenna for wall mounting.
